

HD Construction Equipment Hyundai Europe NV – Quality & Manufacturing Engineer

Do you have a passion for quality, engineering and continuous improvement? As a **Quality & Manufacturing Engineer**, you play a key role in supporting manufacturing operations, resolving technical challenges and ensuring the highest quality standards across our products and processes.

What will you do?

You will focus on four key areas:

EUCUP Quality Management & Manufacturing Support

- Drive quality excellence within EUCUP manufacturing operations
- Investigate quality issues and implement corrective actions
- Support production activities and process optimisation
- Lead root cause analysis and preventive improvement initiatives

Customisation & Engineering Change Support

- Support customised machine configurations and engineering changes
- Develop work instructions and technical documentation
- Resolve technical and material-related issues during production
- Improve planning accuracy and production efficiency

Dealer & Field Issue Resolution

- Investigate and resolve dealer and field quality issues
- Coordinate technical problem-solving with internal and external stakeholders
- Provide technical support for complex cases
- Ensure lessons learned are translated into sustainable improvements

Continuous Improvement & KPI Management

- Analyse production and quality performance data
- Monitor KPIs related to Quality, Cost and Delivery
- Identify opportunities to improve efficiency and quality
- Support standardisation and best-practice implementation

What are we looking for?

- Bachelor's degree in Mechanical, Industrial, Manufacturing or related Engineering
- 3-5 years of experience in Manufacturing, Quality or Production Engineering

- Experience with root cause analysis and structured problem-solving
- Strong analytical and communication skills
- Very good command of English
- Proficient in Microsoft Office applications and SAP
